

BI Implementation

More often than not, implementing Business Intelligence in any organization requires a buy-in from business stake holders for it to become a success. It requires technology as well as business stake holders to come on to the same page to make the most of their investments towards optimizing their business.

One of the leading Global Medical Equipment Company based in US, with a subsidiary in Japan, specializing in endovascular procedures, diagnosis & optimal therapies. Intravascular ultrasound (IVUS) product line and other associated product lines are leading in the developed markets of US, Japan and Europe.

CLIENT PROFILE

BUSINESS SITUATION

The customer had just completed their global ERP rollout and the organization was now connected and digitized. The business, now that, it had connected view of information flow, was in the need of understanding the areas that required attention, growth and a relook from an operational stand point. The customer had already chosen MicroStrategy as their Business Intelligence tool and were looking at leveraging the technology to provide the insights to the users and stake holders.

Synoverge team of technologists, designers and architects engaged with the customer to understand in detail, their processes, domain and nuances. Synoverge conducted a pilot covering an initial automation of Reports that otherwise was manually maintained. Synoverge in that process, worked with the customer in creating the technology architecture, process architecture and implementation methodology for various business functions in a phase manner.

SOLUTION

Projected Business Benefits

- Automated reports based on the data that is now captured in the ERP
- Reduced manual efforts
- Insights to understand what products, functions are underperforming or are at par
- Increased efficiency and faster decision making.
