COLLABORATIVE EXTRANET

Online applications are not just about putting content online, but putting sophisticated applications online. Applications today need to have the ability to have a high level of sophistication, great usability as well as high level of scale – both from the technology stand point as well as manageability stand point.

CLIENT PROFILE

US based Product company focusing on building applications around collaboration across industry verticals.

BUSINESS SITUATION

The customer, when they started off with their business, were focusing on collaboration based applications. In the first 2 years of their operations, they had a product that offered services to universities for collaborations around funding opportunities and grants. As the business grew, there were more customers signed up and the same application was replicated across different implementations. At the end of 2 years, they had 6 implementations of the same product, across different domains catering to the same theme of collaboration.
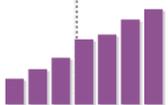

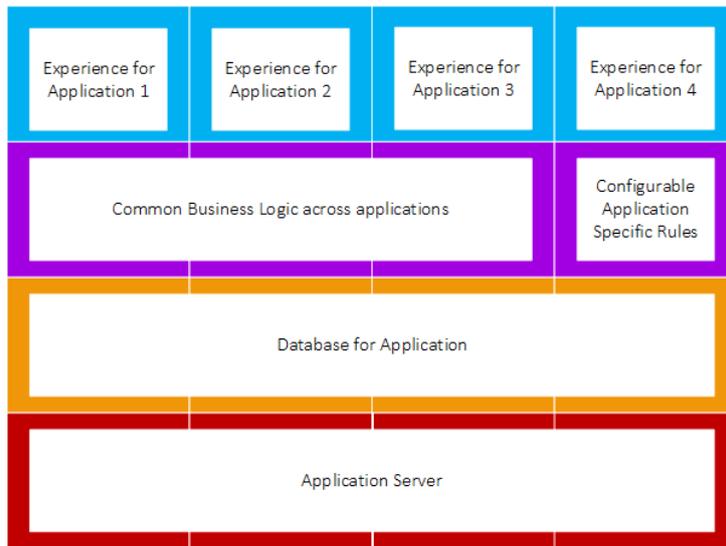

The business was growing for them, and so were the costs. With little documentation in place, our customer was also finding it difficult to engage other partners and vendors for developing applications.

Experience for Application 1	Experience for Application 2	Experience for Application 3	Experience for Application 4
Business Logic For Application 1	Business Logic For application 2	Business Logic For Application 3	Business Logic for Application 4
Database for Application 1	Database for Application 2	Database for Application 3	Database for Application 4
Application Server 1	Application Server 2	Application Server 3	Application Server 4

Synoverge team of technologists, designers and architects engaged with the customer for an initial period of 4 weeks to understand their existing product, its overall vision, current features, architectural blocks & the roadmap. Synoverge provided a reverse transition of the product's knowledge and recommendations at the end of 4 weeks, helping the customer convert their silos based applications into a full-fledged collaboration platform hosting multiple applications, disparate user experiences and a common backend code base.

SOLUTION

Experience for Application 1	Experience for Application 2	Experience for Application 3	Experience for Application 4
Common Business Logic across applications			Configurable Application Specific Rules
Database for Application			
Application Server			

Projected Business Benefits

- Reduced Maintainability of the application
- Reduced Cost of Infrastructure
- Faster Response Time
- Mobile Enablement
- Configurable Rules based engine for application specific rules
- Faster turnaround time
- Customer outreach
